

British Grand Prix 2010

UK TV Bands (470 - 862 MHz)

The most popular band for presenter's microphone's and communications is 470MHz to 862MHz. It is currently used for broadcasting, but where a particular channel is not being used for television transmission it can be used by PMSE. The Silverstone area is particularly congested in these bands. Please look at the table below for channel availability:

Range					Range
