Dear Customer,

## **RADIO REQUIREMENTS FOR THE FA CUP FINAL 2008**

We are writing to you as a previous licensee for the FA Cup Final to inform you that it is classified as a "Major Event". This means that we ask for applications well in advance of the event so we can gather its entire spectrum requirement. Then we work out the best way to accommodate all users rather than deal with it on a first come first served basis. We also ensure a lead and support coordinator is assigned to the event to ensure maximum continuity of service. In this instance the lead Coordinator is Des Vitalis, with support provided by Brent James.

With this in mind we are also writing to you to request details of any radio use that you might require for the FA Cup Final.

Last year's event was a great success as far as the coordination of radio spectrum users was concerned. It would be fantastic if this year's requests could mirror last year's, therefore, I have included a list of the frequencies you were assigned last year. Where possible, it would be extremely useful if you could apply for those again.

It is each attendee's responsibility to ensure that all of their intended radio use is licensed where appropriate. The unauthorised use of equipment could result in the immediate termination of use, a fine of up to £5000 and /or six months imprisonment. Please note that licence fees must be paid before a licence can be issued.

If you would like any further information about radio use at Wembley please do not hesitate to contact us using the contact details above.

Yours sincerely

Des Vitalis,

Event Coordinator
